PREFACE

Because the supply and use of energy involves aspects of so many different activities, energy statistics appear in a wide range of ABS collections and a correspondingly wide range of ABS publications.

This DIRECTORY OF ABS ENERGY STATISTICS is intended to assist those involved in discussions of energy topics to locate the information available in the ABS that may be of relevance to a particular topic.

INTRODUCTION

Interest in energy matters has increased in recent years as a result of very rapid price increases in some forms of energy and occasional shortages in the supplies. There has been a corresponding increase in requests for statistical data bearing on energy reserves, production, conversion into other forms, distribution and consumption. This Directory provides a comprehensive listing of ABS publications which contain energy related data.

Other organisations which produce statistics in this field include the Department of National Development and Energy, the Joint Coal Board, the Australian Institute of Petroleum, the Electricity Supply Association of Australia, and the Bureau of Mineral Resources, Geology and Geophysics. State Government departments and instrumentalities also are important sources of energy data, particularly at the regional level, while a number of private corporations and other entities operating within the energy field also publish or make available a significant amount of energy information.

Suggestions for improvements to this Directory should be addressed to either Mr David Lengyel on Canberra (062) 525653 or Information Services units of ABS offices.

HOW TO USE THIS DIRECTORY

This Directory is divided into three parts - A, B and C.

PART A lists various ABS publications and sources of data under broad energy topic headings, namely

- 1 Exploration
- 2 Production and Transformation
- 3 Foreign Trade
- 4 Demand
- 5 Manpower
- 6 Prices
- 7 Public Authority Finance
- 8 Research and Development
- 9 Other Related Aspects.

PART B lists all relevant publications in ABS catalogue number order. Generally, the following data has been included for each publication:

- . ABS catalogue number and title of the publication
- . Frequency of issue, the issue of the publication to which the table numbers etc, specifically refer, and, for priced publications, the price of the publication.
- . The table number(s) and heading(s) of tables which contain energy related data. (Note that both the table number(s) and heading(s) may change from one issue of a publication to the next).
- . The type of data contained in the table columns and rows, and which part(s) of the energy sector is/are referred to. Only those activities/industries which are relevant to the energy sector are listed in the description.
- . Where applicable, additional information that may be of interest is then given (eg expected changes to the publication, unpublished data that are available etc).
- . The name and telephone number of the person who may be contacted in regard to any queries about the publication.

PART C is a detailed energy commodity index to ABS publications listed in alphabetical order. It should be noted that this index contains no reference to the "Year Book Australia" (ABS catalogue number 1301.0) as the book itself contains a detailed index.

HOW TO ORDER PUBLICATIONS

Free Publications

Users can obtain copies of free publications by calling at, phoning, or writing to the ABS office in their capital city or the ABS Central Office, Canberra.

When requesting a publication, please quote the title and catalogue number.

ORDER FORM B (Central Office publications) and ORDER FORM C (State Office publications) shown at the back of this Directory should be used to indicate your requirements of 'no charge' publications. The address of the relevant ABS office is shown on the reverse side of the order form. Users who wish to receive issues of publications on a regular basis will have their names and addresses placed on the appropriate ABS mailing lists. Users of Central Office publications who are already receiving regular issues of ABS publications and wish to add other publications to their mailing lists, should quote the ABS reference number when forwarding their order form. The reference number is shown on the address label of each publication despatched from ABS Canberra.

Priced Publications

Copies of priced publications, with the exception of the 1976 Census publications, may be purchased from Australian Government Publishing Service (AGPS) bookshops in each capital city and Canberra, and from State ABS offices. The addresses of AGPS bookshops and State ABS offices are given on pages ix. Copies may also be ordered by post from:

Mail Order Sales
Australian Government Publishing Service
PO Box 84
CANBERRA, ACT 2600

ORDER FORM A, at the back of this Directory, should be used for this purpose.

When mail orders are sent the title and catalogue number of the publication required should be quoted. Unless a credit account has been established, or Bankcard is to be used, the total cash (ie price of publications plus postage) must be sent with mail orders, with remittances made payable to the Collector of Public Monies.

Alongside the title of 'priced' publications in this Directory are two prices - the first is for the publication without postage and the second is for the publication and postage at ordinary rates in Australia. Airmail and overseas rates will be advised on request.

WHERE TO CONTACT ABS OFFICES

There is an ABS office in Canberra, each State capital city and Darwin. Contact Information Services at any of the addresses listed below for information on statistics and statistical publications handled by the ABS.

5209.0 AUSTRALIAN NATIONAL-ACCOUNTS - INPUT-OUTPUT TABLES

Irregular, 1974-75 (due for release in mid-1981); price not yet available.

The following 5 of the 109 Input-Output commodity groups (and industries) are relevant to energy statistics - Forestry and logging (03.00), Coal and crude petroleum (12.00), Petroleum and coal products (27.08), Electricity (36.01) and Gas (36.02). It should be noted that a number of commodities (and activities) that are predominately of a non-energy nature are included in these commodity groups (and industries).

A. Basic Tables:

Table 1: Make matrix - output by commodity group by industry.

A column shows the local supply of a commodity group from each of the 109 industries. A row shows the production by an industry of each of the 109 commodity groups.

Table 2: Input by industry and final demand category and supply by commodity group (absorption matrix).

Content as for Table 1 under Catalogue No. 5214.0 below.

Table 3: Imports Matrix - supply by commodity group and inputs by industry and final demand category.

The value of imports c.i.f., duty on those imports and value of imports plus duty classified by commodity group and used by each industry and final demand category is shown in this table. A column shows the disposition of these items - imports c.i.f., duty and imports plus duty - classified by commodity group to each of the 109 using industries and to each category of final demand. A row shows the value of usage of competing imports by an industry. A column showing the disposition of total complementary imports is also included.

Table 4: Reconciliation of flows at basic values and purchasers' prices by commodity group.

Content as for Table 2 under Catalogue No. 5214.0 below.

B. Industry by Industry Tables (basic values, recording intra-industry flows):

(i) Disaggregated (109) industry classification:

- Direct allocation of competing imports

Table 5: Flow matrix.

A row in this table shows the disposition of the value of Australian Production (industry output) to each using industry and to each category of final demand. a column shows the value of usage by each industry (of inputs from supplying industries and of primary inputs).

Table 6: Direct requirements coefficients from Table 5.

Table 7: Total requirements coefficients from Table 6.

- Indirect allocation of competing imports

Table 8: Flow matrix.

Content as for Table 5, except that the disposition of the value of Total Supply (Australian Production plus competing imports) is shown in the rows.

Table 16: Total requirements coefficients from Table 15.

C. Other Tables:

Table 17: Primary input content (total requirements) of \$100 final demand by industry.

For each of the 109 Input-Output industries, a row shows the amount of primary inputs (Wages, salaries and supplements, Gross operating surplus, Commodity taxes less subsidies, Indirect taxes n.e.c., Sales by final buyers, Complementary imports c.i.f., Duty on complementary imports, Competing imports c.i.f., and Duty on competing imports) required from all industries in order to meet \$100 of final demand for the output of that industry.

Table 18: Primary input content (total requirements) by industry of each category of final demand.

This table shows, for each of the 109 Input-Output industries, the value of Wages, salaries and supplements, and Gross operating surplus ultimately absorbed by each category of final demand.

Table 21: Specialisation and coverage ratios by industry.

Appendix C: Input-Output classification in terms of ASIC 1969 (Preliminary edition).

Appendix D: Key between the aggregated (29) industry classification and the disaggregated (109) industry classification.

NOTE: (1) Most of the data contained in this bulletin are currently available on magnetic tape (Refer to Catalogue no. 5217.0, Australian National Accounts, Input-Output Tables 1974-75, Final Results - Data on Magnetic Tape, Information Paper).

5214.0 AUSTRALIAN NATIONAL ACCOUNTS - INPUT-OUTPUT TABLES (ADVANCE RELEASE OF FINAL DATA)

Irregular, 1974/75.

The following 5 of the 109 Input-Output commodity groups (and industries) are relevant to energy statistics - Forestry and logging (03.00), Coal and crude petroleum (12.00), Petroleum and coal products (27.08), Electricity (36.01) and Gas (36.02). It should be noted that a number of commodities (and activities) that are predominately of a non-energy nature are included in these commodity groups (and industries).

Table 1: Input by industry and final demand category and supply by commodity group - indirect allocation of competing imports, basic values, recording intra-industry flows, 109 industries.

A row in the table shows the disposition of the value of total supply of a commodity group to each of 109 using industries and to each category of final demand, ie Private final consumption expenditure, Government final consumption expenditure, Private gross fixed capital expenditure, Public enterprises gross fixed capital expenditure, General government gross fixed capital expenditure, Increase in stocks and Exports of goods and services.

A column shows the value of usage of each input by an industry. The inputs consist of intermediate inputs (of 109 commodity groups) and primary inputs (Wages, salaries and supplements, Gross operating surplus, Commodity taxes less subsidies, Indirect taxes n.e.c., Sales by final buyers, Complementary imports c.i.f., and Duty on complementary imports).

Table 2: Reconciliation of flows at basic values and purchasers' prices by commodity group.

The rows of this table show, for each of the 109 commodity groups, the value of the flows to total intermediate usage and each category of final demand (as listed under Table 1 above). The flows are shown at both basic values and purchasers' prices, with the difference being shown as Commodity taxes less subsidies and the total of the commodity margins-Wholesale trade, Retail trade, Road transport, Railway and other transport, Water transport, Air transport, Marine insurance and Restaurants, hotels and clubs - relating to the flows.

EXPECTED DEVELOPEMNTS: The first of an annual series of tables, commencing with the year 1977/78, is expected to be published in 1982.

5215.0 AUSTRALIAN NATIONAL ACCOUNTS - COMMODITY BULLETIN

Irregular, 1974-75 (due for release in mid 1981)

Table 1: Commodity supply by detailed commodity

For each Input-Output commodity, the values of Australian production, competing imports and complementary imports within each commodity group are shown.

Energy commodities are firewood (03.00.004), black coal (12.00.001), brown coal (12.00.002), automotive petrol (27.08.001), auto-distillate and industrial diesel fuel (27.08.007), fuel oil for burning (27.08.008), aviation turbine fuel (27.08.004), other refinery products (27.08.012), electricity (36.01.001) and gas (36.02.001).

Table 2: Commodity classification (Manufacturing, Electricity and Gas)

This table shows the composition of each Input-Output commodity in terms of Economic Census production items, Australian Import Commodity Classification (AICC) items and Australian Export Commodity Classification (AECC) items.

EXPECTED DEVELOPMENTS: The series is expected to become annual, commencing with the release of 1977/78 data.
